Research & Innovation Week

Institute for Interdisciplinary Data Science (IIDS):
Wicked Problems Solved

Location: West Pavilion, 3rd Floor/South Lounge
Time: April 2nd, 2019 Tuesday 2:15 – 3:30pm

Institute for Interdisciplinary Data Science (IIDS) aims to develop cutting-edge analytic strategies and techniques and apply them to both quantitative and qualitative data to address challenging real-world problems in areas such as education, business, health sciences, social sciences, psychology, biological and biomedical sciences. IIDS was conceptualized in 2014, and the faculty hires began in 2015 with the institute being fully established in 2017. The Institute is currently directed by Dr. Jacinda Dariotis, Professor in School of Education, and consists of five core faculty members across four colleges. In this event, Dr. Dariotis will provide an overview of the Institute, followed by individual presentations of all of the members. The audience will have 15-20 minutes to interact with the panelists.
